

Online Course Enrollment System – Feature Set II

1. Flowchart Diagram Prompt

Prompt:

Create a clean, attractive and meaningful 3D-style flowchart for an Online Course Enrollment System – Feature Set II. Include these five modules in the exact order:

Start → Student Details → Course Details → Enrollment → Course Duration → Completion Status → End

Use proper standard flowchart symbols:

Oval for Start and End

Parallelogram for entering/displaying student and course information

Rectangle for processing enrollment, course duration and completion status

Diamond for important decisions such as “Details Valid?”, “Course Available?”, “Payment Successful?” and “Course Completed?”

Use clear directional arrows connecting every step.

Include meaningful sub-processes: Student Details: Student ID, Name, DOB, Gender, Email, Mobile, Address

Course Details: Course ID, Course Name, Description, Fees, Level, Instructor

Enrollment: Select Course, Validate Details, Verify Payment, Generate Enrollment ID

Course Duration: Start Date, End Date, Total Duration, Number of Classes, Class Hours, Schedule

Completion Status: Course Progress, Attendance, Assignments, Exam Status, Certificate Status, Final Result

Make the layout straight, organized and easy for college students to understand. Use a white/light background, professional typography, subtle 3D effects, clean arrows, balanced spacing, and a modern academic presentation style. Do not overcrowd the diagram. Clearly label every symbol.

2. ER Diagram Prompt

Prompt:

Create a professional, attractive ER (Entity Relationship) Diagram for an Online Course Enrollment System – Feature Set II containing the entities:

STUDENT, COURSE, ENROLLMENT, COURSE_DURATION, COMPLETION_STATUS

STUDENT attributes:

Student_ID (Primary Key), Student_Name, DOB, Gender, Email, Mobile, Address, City, State, PIN_Code, Qualification

COURSE attributes:

Course_ID (Primary Key), Course_Name, Description, Category, Fees, Level, Instructor_Name

ENROLLMENT attributes:

Enrollment_ID (Primary Key), Student_ID (Foreign Key), Course_ID (Foreign Key), Enrollment_Date, Username, Payment_Status

COURSE_DURATION attributes:

Duration_ID (Primary Key), Course_ID (Foreign Key), Start_Date, End_Date, Total_Duration, Number_of_Classes, Class_Hours, Schedule

COMPLETION_STATUS attributes:

Completion_ID (Primary Key), Student_ID (Foreign Key), Course_ID (Foreign Key), Progress, Attendance_Status, Assignment_Status, Exam_Status, Certificate_Status, Overall_Status, Final_Grade, Completion_Date

Show clear relationships:

STUDENT 1 : M ENROLLMENT

COURSE 1 : M ENROLLMENT

COURSE 1 : 1 COURSE_DURATION

STUDENT 1 : M COMPLETION_STATUS

COURSE 1 : M COMPLETION_STATUS

Use standard ER notation with rectangular entities, oval attributes, underlined primary keys, foreign keys clearly marked, and diamond-shaped relationships. Use connecting lines with 1:M and 1:1 cardinality labels. Make the diagram symmetrical, uncluttered, colorful but professional, with a subtle 3D academic style and clear readable text.

3. Algorithm Step-by-Step Prompt

Prompt:

Create an attractive and meaningful step-by-step algorithm diagram for an Online Course Enrollment System – Feature Set II.

Display the algorithm as a vertical/straight-line sequence with arrows, using numbered steps. Keep the design clean and easy to understand. Do not use unnecessary decorative boxes or random shapes.

Algorithm:

Step 1: Start the Online Course Enrollment System.

Step 2: Enter and store Student Details such as Student ID, Name, DOB, Gender, Email, Mobile and Address.

Step 3: Validate the student information.

Step 4: Display available Course Details such as Course ID, Course Name, Fees, Level and Instructor.

Step 5: Allow the student to select a course.

Step 6: Check whether the entered details and selected course are valid and available.

Step 7: If valid, process the enrollment and verify payment.

Step 8: Generate a unique Enrollment ID and save the enrollment information.

Step 9: Store Course Duration information including Start Date, End Date, Total Duration, Number of Classes, Class Hours and Schedule.

Step 10: Track the student's Course Progress, Attendance, Assignments and Exam Status.

Step 11: Check whether the student has completed the course requirements.

Step 12: Update Completion Status as Completed, In Progress, Pending or Not Completed.

Step 13: Update Certificate Status and Final Grade/Result.

Step 14: Display the enrollment/completion confirmation to the student.

Step 15: End the process.

Design requirements: modern 3D academic style, white/light background, attractive typography, blue/teal professional accents, smooth arrows, equal spacing, clear numbering, readable text, and a polished college-project presentation look. Keep the entire algorithm in one continuous flow from Start → Step 1 → Step 2 → ... → Step 15 → End.
